

Measuring Guide for Viroguards for standard upblast fans

Tip the fan back toward the fan drain. If it is already hinged so the drain is not at the lowest spot, take measurement as if the fan tipped back toward the drain. NOTE: The fan will tip back toward the drain with the Viroguard installed. Make sure you have 2' clearance on all sides to allow the rain flaps to open easily and enough clearance for the fan to tip back toward the drain. If there is not enough clearance, please take additional measurements and pictures to send with order with a separate sketch below. The Viroguard can be custom manufactured to work around clearance issues and to allow access for cleaning the fans, stacks, and Viroguard. Please provide the fan make and model number. Make _____ Model# _____

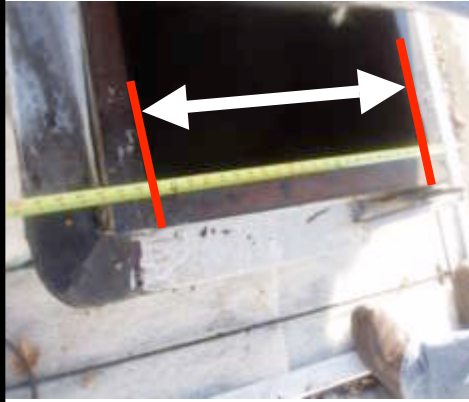

1) Measure the inside of the fan base. We have dimensions for most major fan manufacturers.

Measurement #1 _____

2) Measure the inside of the duct just below the fan from left to right on the front side

Measurement #2 _____

3) Measure the inside of the duct just below the fan from left to right on the backside.

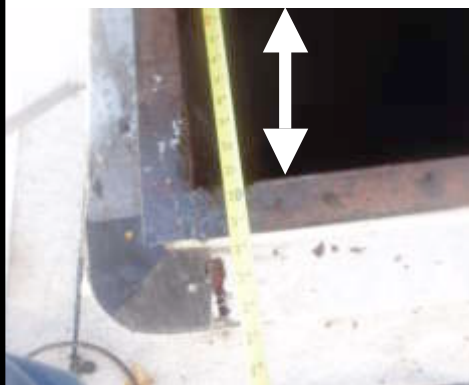

Measurement #3 _____

4) Measure the inside of the duct just below the fan from front to back on the right side.

Measurement #4 _____

5) Measure the inside of the duct just below the fan from front to back on the left side.

Measurement #5 _____

6) Additional measurement needed for the bowl for US (Acme) style fans.

Measurement #6 _____
