Viroguard® (Patent pending) system of keeping a roof clean and free of grease between, during, and after Kitchen grease exhaust cleaning services!!

Grease does not end up on roof to be illegally disposed of.

Grease and cleaning solutions flow out from fan into the Viroguard

Fan tips back so cleaning solutions flow into Viroguard unit when cleaning with the included hinges

And the exclusive rain-shield keeps excess rain and weather out and prevents overflowing between cleanings!!

And the roof is always clean in all weather conditions!!

So you can Legally dispose of the grease and cleaning wastewater to the inside of the restaurant either through the stack or across the roof through a standard inexpensive vacuum hose which any competent cleaning company should have!!
